Escape
An Escape Room Game
by Sarah Brand and Andreas Hennings

- Technical Supplement -

1. Hardware

The game was created to run smoothly on desktop computers and laptops. While a dedicated graphics card is recommended, it is not strictly necessary. Note that this game will not run on Tablets, Smartphones or -watches and does not support VR headsets.
We recommend at least 4 GB of RAM.

2. Operating System

This game will run on a Windows 10 system. Older versions of Windows were not tested, but might probably work. If needed, a Linux Version of this game can also be compiled.

3. Input Devices

In order to play this game, a keyboard and mouse are needed.
